

## **Powerhouse Operative**

Arjowiggins is the world's leading producer of Translucent Paper. Our Chartham Mill (U.K.) has been producing translucent paper since 1938 and has developed excellent production skills and technical expertise. This experience and knowledge helped our Quzhou Mill (China) to produce products to the same high-quality standard. Both operations have built up a worldwide reputation for the prestigious Curious & Gateway brands, used in Europe and the Far East for printed commercial advertising.

Under development for 4 years, Arjowiggins has just commercially launched a new barrier translucent paper, Sylvicta. Impervious to oxygen, aromas, oils and greases, Sylvicta is already being used to replace plastic packaging films, not just because of its inherent barrier properties, but because it is recyclable, marine biodegradable and compostable.

Arjowiggins Chartham Mill Ltd is based in the historic village of Chartham just outside of Canterbury, England. The Mill, which operates 24 hours a day, consists of one paper machine and a paper conversion department producing around 6,000 tonnes of translucent paper per year. We are entering an exciting period where technical and quality expertise are key to the successful development of our product for the future.

### **Job Role**

We are now looking for a Shift Boiler Operator at our CHP Plant. Reporting to the Powerhouse Manager, the job holder will be responsible for the day-to-day operation of all aspects of the CHP operation. This includes maintaining and checking the feedwater quality, monitoring the safe operation of 2 x gas fired package boilers, a Waste Heat Boiler, a Gas Turbine and compressed air plant. The successful applicant will also be required to report and act upon any faults, carry out functional safety checks, and monitor steam pressures and temperatures to all production departments. The job also involves liaising with external service providers, production departments and the engineering maintenance team.

### **Person requirements**

Wherever your talents and aspirations lie, we expect a high level of achievement. But every bit as important will be the individual attributes and personal qualities you bring to our team.

Our whole approach is built on working together, being consistent and having the courage to do the right thing. All of which is underpinned by a commitment to safety and excellence in what we do. It's essential that you share those values.

### **Qualifications and experience requirements**

- Demonstrable experience of recognising developing faults, actioning repairs as required.
- A basic understanding of operational control concepts.
- Knowledge of Steam and Power Generation (desirable).

- Good observational skills and a keen eye for detail.
- Able to work well under pressure.
- Good communication skills
- Able to work using own initiative, working with minimal supervision.
- If successful in this role, we will require you to attend various training courses and it is mandatory requirement for you to successfully complete the CertIBO (BOAS) qualification (or equivalent) within your probationary period.

### **Expected Competencies**

- Apply expertise and Technology.
- Practical aptitude
- Attention to detail.
- Ability to adapt and respond to change.
- Goal orientated, methodical and well-organised.

### **Salary**

Competitive salary

Annual Bonus Opportunity

Pension Scheme

### **Location**
