

Mechanical Engineering Technicians

Arjowiggins is the world's leading producer of Translucent Paper. Our Chartham Mill (U.K.) has been producing translucent paper since 1938 and has developed excellent production skills and technical expertise. This experience and knowledge helped our Quzhou Mill (China) to produce products to the same high-quality standard. Both operations have built up a worldwide reputation for the prestigious Curious & Gateway brands, used in Europe and the Far East for printed commercial advertising.

Under development for 4 years, Arjowiggins has just commercially launched a new barrier translucent paper, Sylvicta. Impervious to oxygen, aromas, oils, and greases, Sylvicta is already being used to replace plastic packaging films, not just because of its inherent barrier properties, but because it is recyclable, marine biodegradable and compostable.

Arjowiggins Chartham Mill Ltd is based in the historic village of Chartham just outside of Canterbury, England. The Mill, which operates 24 hours a day, consists of one paper machine and a paper conversion department producing around 6,000 tonnes of translucent paper per year. We are entering an exciting period where technical and quality expertise are key to the successful development of our product for the future.

Job Role

Our Engineering resource works a variety of day, day rota and continuous shift patterns and provides vital support to the process areas and Powerhouse on a continuous 24-hour basis.

Successful candidates will assist with planned maintenance, installation, fault diagnosis and improvement work on a wide range of papermaking and converting machinery observing all the required safety standards.

Person requirements

Wherever your talents and aspirations lie, we expect a high level of achievement. But every bit as important will be the individual attributes and personal qualities you bring to our team.

Our whole approach is built on working together, being consistent and having the courage to do the right thing. All of which is underpinned by a commitment to safety and excellence in what we do. It's essential that you share those values.

If you are self-motivated to work as an individual, can work successfully as part of a team, have good communication skills and a proven ability to problem solve, these positions should interest you

Qualifications and experience requirements

Ideally suitable candidates will have served a recognised Apprenticeship and be qualified to a minimum of National Certificate Level in an engineering discipline. You will ideally have recent experience in a heavy industrial environment.

**Salary & Benefits**

Salary – up £34,000.00 Including Engineering Supplements
Annual Bonus Opportunity
Non-Contributory 7% Pension Scheme
